SUMMARY

Results-driven Mobile Application Developer with 2 years of experience specializing in cross-platform development (React Native / TypeScript), alongside a solid practical foundation in native iOS development (Swift / UIKit). Combining a strong mathematical background from BSU with software engineering, I excel at solving complex logical challenges, optimizing UI performance, and writing clean, maintainable code.

My key advantage lies in understanding mobile development at both the cross-platform and native platform levels. Beyond building UI components, I have a deep grasp of native lifecycle management, hardware permissions, asynchronous concurrency, and error handling under the hood. Passionate about creating responsive, production-ready mobile apps with intuitive navigation and reliable state management.

SKILLS

Programming Languages

TypeScript, JavaScript (ES6+), Swift

Cross-Platform Mobile

React Native, Expo, React Native CLI, Metro

Native iOS Development

UIKit, CoreLocation, URLSession, Alamofire, Storyboards, CocoaPods / SPM

State Management

Jotai, Redux / Redux Toolkit, React Context

API & Async Programming

REST API, Axios, Swift async/await, Push Notifications

Tools & Build Systems

Xcode, Git, GitHub, Vite, npm, yarn

Languages

Russian (Native), English (A2 — technical reading)

PROJECTS

WeatherApp — Native iOS Weather Application

Swift, UIKit, CoreLocation, Alamofire / SwiftLocation, SPM

- Developed a native iOS weather application with state-based flow control (Loading, Weather Details, Error View).

- Implemented user location fetching using **CoreLocation** with proper permission handling and fallback states.
- Designed custom root navigation via **UINavigationController**, seamlessly switching views based on app states.
- Ensured thread safety and UI stability by implementing defensive lifecycle guards (`isViewLoaded`) during property updates and `didSet` observer calls.
- Integrated asynchronous REST API networking using modern Swift **async/await** concurrency patterns.

PurpleSchool App — Educational Platform Mobile Application

React Native, TypeScript, Expo, Jotai, React Navigation

- Developed a comprehensive mobile application for browsing and managing courses.
- Implemented user registration and authentication systems with data validation.
- Created a course catalog with advanced filtering, dynamic search, and smooth list scrolling.
- Developed a personal student profile with the ability to upload and update avatars directly from the gallery or phone camera.
- Designed a convenient navigation system using a custom side drawer (Drawer Navigation).
- Integrated push notifications and configured click handling logic to redirect users to the target screen.

React Posts — Dynamic Publication Management Platform

React, JavaScript, REST API, Axios, CSS Modules, React Hooks

- Developed a web-oriented application for managing posts and streaming data.
- Integrated the application with an external REST API (JSONPlaceholder) using Axios for CRUD operations.
- Implemented advanced filtering, multi-criteria sorting, and real-time "live" search.
- Optimized UI performance via computation memoization (`useMemo` hook).
- Created a responsive modular layout with custom modal windows and UI controls.

EDUCATION

Belarusian State University (BSU)

2024–2028

Faculty of Mechanics and Mathematics | Specialty: Mechanics and Mathematical Modeling

CERTIFICATIONS & COURSES

PurpleSchool - Full Professional Course: React Native and TypeScript

Gained deep knowledge in mobile application architecture, data flow management, typing, and iOS/Android native modules integration.

PurpleSchool - Native iOS & Swift Development

Mastered native iOS UI construction with UIKit, Storyboards, concurrency with `async/await`, `CoreLocation` permissions, and app lifecycle management.
